Profile

M.S. candidate in AI & Data Analytics (Dec. 2026) and marketing technologist who builds working AI systems. Experienced in **machine learning** and **predictive modeling** with Python and scikit-learn, **deploying LLM-powered automation** and **AI agents**, and building **data pipelines** that turn analysis into business decisions. Skilled in tools like Excel, R Studio, VS Code, Make.com, Claude Code, and Orange.

- AI & Machine Learning
- Prompt Engineering
- Data Mining
- Sentiment Analysis
- Data Analytics
- Marketing Research & Data
- Predictive Modeling
- LLM Integration
- Workflows & Automation
- Data Visualization
- Agentic AI
- Python & Scikit-Learn

Professional Experience

McDonald's — 2023-Present

Match Corporation Franchise Organization (Owner/Operator Group)

Marketing and Communications Coordinator

Lead the marketing and communication strategy for franchisee locations, focusing on driving digital guest engagement, workflow automation, internal team communication, and brand visibility. Executed brand-focused initiatives, including app engagement, OliviaAI Internal Communications, RadioOne Santa Drive, and QR code implementation.

- **Designed and implemented foundation of OliviaAI communications system, encoding 100+ response options.** Administered system, established operational check-ins, and ensured full employee registration and onboarding. Managed internal communications, employee surveys, analytics tracking, and life-event acknowledgments.
- **Engineered an autonomous communication ecosystem** using Make.com, Notion, and Gamma to centralize and summarize organization meetings. The system automates real-time transcript logging, meeting summarization, and creates presentations for the leadership team. The workflow successfully eliminates manual documentation, saving the communications manager approximately 4 hours per week.
- **Spearheaded 2024 Digital First campaign** across mini-billboards, POP displays, QR codes, tabletop signage, and takeout bag hangers. Increased digital guest counts to one-third of all guest transactions.
- **Lowered 12-month crew turnover by 20% compared to the business unit average** through consistent communication and recognition.

Jay County Visiting and Tourism Bureau — 01/2021-10/2021

Nonprofit tourism and local attraction promotion in Jay County, IN.

Marketing Intern

- **Increased Facebook post engagements by 253% and expanded audience reach by 223%**. **Achieved 8,500+ views and 1,000 engagement clicks** on single social media post.
- Led marketing efforts for Jay County Shop Hop event, **resulting in over 100 attendees and participation from 40+ businesses**.

Technical Projects

AI JOB SEARCH & RESUME TAILORED PIPELINE | MAKE.COM, OPENAI API, APIFY, NOTION

- **Engineered a scheduled pipeline that scrapes LinkedIn and Indeed listings** via Apify and uses an OpenAI model with a custom scoring rubric (hard-zero filters, fit penalties**). Outputting top 5 ranked roles** as a structured JSON.
- Built a second LLM stage that **tailors resume sections to each posting under anti-hallucination constraints** (approved-vocabulary only)
- **Implemented URL normalization, deduplication, and error-handling** routes to keep runs reliable through 1,000+ operations.

NBA GAME OUTCOME CLASSIFIER | PYTHON, SCIKIT-LEARN, & RANDOM FOREST

- Engineered predictive features (win streaks, rest days, prior results, one-hot team encodings) across 1,300+ games to forecast home-team wins.
- Raised accuracy from a 59.4% decision-tree baseline to 68.5% by tuning a Random Forest with GridSearchCV. Ran ablation tests showing rest-day features outperformed win streaks.

Technical Projects (Continued)

RECOMMENDATION ENGINE | PYTHON, PANDAS, & ASSOCIATION RULE MINING

- **Implemented the Apriori algorithm** to mine frequent itemsets from 100k MovieLens ratings, generating "If liked X→ will like Y" association rules for personalized recommendations.
- Validated rules on held-out users, with **top recommendations reaching 97% confidence**. Mirrors product-affinity logic for e-commerce and loyalty personalization.

NBA PLAYER CONSISTENCY MODEL | PYTHON & SUPABASE

- **Engineered a high-volume data pipeline** managing a repository of **1M+ historical data points**, utilizing **Pandas** to clean and process 100,000 records for real-time performance forecasting.
- **Applied statistical modeling**, including Rolling Coefficient of Variation, standard deviation, and weighted averages, to output ranked CSVs identifying high-consistency NBA players.
- **Integrated Python-based ETL processes** to filter complex datasets and automate the delivery of actionable performance insights.

AI ORCHESTRATION & MARKETING APIs | GRADUATE RESEARCH (AIML-505)

- Analyzed shift from content generation to autonomous workflow execution, examining how endpoints, OAuth authentication, payload schemas, and webhooks enable AI agents to orchestrate marketing pipelines.
- Proposed a tiered system/process/experience API architecture, evaluated best and worst case deployments, and identified guardrails to prevent hallucination-driven failures.

EDUCATION

Master of Science, Artificial Intelligence & Data Analytics
Indiana Wesleyan University – Marion, IN ▪ 12/2026

- Advanced Coursework: Model Development (AIML-501), Data Visualization (DTAN-505), Data Mining (DTAN-525), Big Data (DTAN-515), Text Mining (DTAN-520), Generative AI & Large Language Models (AIML-505).

Bachelor of Science, Marketing
Ball State University – Muncie, IN ▪ 12/2024

- Member of American Marketing Association
- Relevant Coursework: Digital Marketing, SEO Marketing, Social Media Marketing, Retail Strategy, Product Marketing, Business Law, Economics

Certificate in Digital Marketing
Harvard Business School Online – Online ▪ 07/2024

TECHNICAL SKILLS & CERTIFICATIONS

Languages and Tools: Python (pandas, NumPy, scikit-learn), SQL, R (ggplot2, tidyverse), Excel, Jupyter, VS Code, Git/GitHub
Machine Learning: Supervised Learning, classification, feature engineering, model training and evaluation, hyperparameter tuning (GridSearchCV), cross-validation, association rule mining, predictive modeling, statistical analysis
Data & Automation: ETL pipelines, data cleaning and preprocessing, Supabase/PostgreSQL, REST APIs, webhooks
Generative AI: Large Language Models (LLMs), prompt engineering, OpenAI API, retrieval-augmented generation (RAG), agentic AI
Marketing & Analytics: Campaign analytics, A/B testing, segmentation, consumer insights, text mining, sentiment analysis, HubSpot, Hootsuite
Certifications: Certificate in Digital Marketing (Harvard Business School Online), Hootsuite Social Media Marketing, HubSpot Academy
